

The Crystal XL is one of the most unique and instantly recognisable handheld magnifiers on the market today, now the second generation version has arrived.

Key new Features:

- Latest TFT display technology
- Increased magnification levels up to 14x
- Save and recall 100 images

The Crystal XL is still best in class for image quality, innovation and style, along with newly added features and functions which distinguish it from the competition. From the outside the Crystal XL's intuitive design has been enhanced with high visibility colours and button functions to better meet the needs of our user.

On the inside there are some innovative changes to incorporate new technologies, like a more scratch resistant, brighter display and improved camera focal ranges. These features not only give a crystal clear image but also provide increased magnification levels. Other new features include save and recall of images which can also be uploaded to your PC via the micro USB connector. Try the Crystal XL yourself and see how easy it is to use.

Other features include:

- Illumination on/off control
- Integrated flip-out stand
- Micro USB battery charge connector
- Power Save mode / auto power off
- Improved battery life
- Setting to adapt to different lighting conditions
- Rubberised grip for comfort and control
