50× No. 2036-50

PEAK POCKET MEASURING MICROSCOPE

While we have been serving in various fields for a long time, our Peak Pocket Microscope has a large sale as a fountain pen-type simple microscope.

We have newly selected the models of 25× and 50× out of this series, in which we have incorporated scales in their lens barrel, as shown in the figure.

The Pocket Measuring Microscope can provide an efficient use of brightness to compare and observe an object by means of the built-in scale and its excellent definition, thus permitting further expansion of the Microscope usage.

The Microscope can be focused in the same way as in our microscopes so far produced. Observe an object by holding the unit with the notch of the acrylic-cylinder point in front, with the center of the object lens placed about right over the object, tilting the cylinder towards front and rear while applying an eye to the eye lens and setting the unit at an angle of catching the object clearly.

Item No.	Magnification	Field of view	Size	Net weight	Min. scale division	Measuring range
No. 2036-25	25×	3.30mm ϕ	12.4 ϕ ×127mm	12.2 gm.	0.05	3.00
No. 2036-50	50×	2.00mm ϕ	12.4 ϕ ×127mm	12.2 gm.	0.02	1.60
